

## Evaluating censuses of population and housing

By United States. Bureau of the Census

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 106 pages. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1985 Excerpt: . . . to yield estimates of the probability of dying from birth to the conventional ages 1, 2, 3, 5, 10, and 20. These values also provide a basis for estimating the reference point for each of the estimated  $t(x)$  parameters assuming that mortality has been constant or has declined in a linear fashion (cf. Feeney, 1980). Subsequently, a variety of modifications to and extensions of the basic method have been proposed. Sullivan (1972) and Trussell (1975) have developed alternative sets of adjustment multipliers to increase the flexibility of the method under differing fertility conditions. Extensions of the basic method include the development of a duration of marriage-based version of the Brass age model, the application of the basic method to data from two surveys to obtain an estimate of inter-survey child mortality, and a variant in which the fertility experiences of true cohorts are used to adjust the model-based adjustment multipliers used...
